

PCIS-DASK/D2K-DASK: Data Acquisition Software Kit. DLL Library for Win-32 Applications

Features

- 32-bits Windows DLL for data acquisition
- Support Windows 98/NT/2000/XP
- Provide full functionalities of NuDAQ and DAQ-2000 series
- Whole new powerful utility, CodeCreator is now included
- Complete tutorial and sample programs
- User-defined callbacks for asynchronous data acquisition.
- Provide kernel-level event and map address for sophisticated applications

Introduction

PCIS-DASK and D2K-DASK are the industry's most advanced 32-bit device driver for custom data acquisition application development. PCIS-DASK and D2K-DASK software drivers provide a common set of Application Programming Interface (API) to ADLINK's extensive family of PCI/CompactPCI/PXI plug-in data acquisition cards, and are ideal for custom applications development under Microsoft Windows 98/NT/2000/XP. With DASK driver, you can easily access all functionality of NuDAQ and DAQ-2000 series data acquisition cards. In addition, DASK delivers great performance, reliability, and portability to your data acquisition system.
