### Introduction

ADLINK PCI-723X are 32-CH isolated input and/or output cards. They provide a 2,500 V optical isolation protection. The wide input range of the PCI-7230 and PCI-7233(H) makes it easy to sense the status of external devices. The non-polarity characteristic is suitable for a wide variety of industry applications. The PCI-7230 and PCI-7234 devices also feature a wide output range from 5 to 35 V, which is suitable for relay driving and industrial automation applications.

The PCI-7230 and PCI-7233(H) also provide two interrupt sources on digital input channels. The PCI-7233(H) devices also feature the change-of-state (COS) interrupt. It means when any of these digital inputs changes its state, an interrupt will be generated for user to handle this external event.
