## Introduction

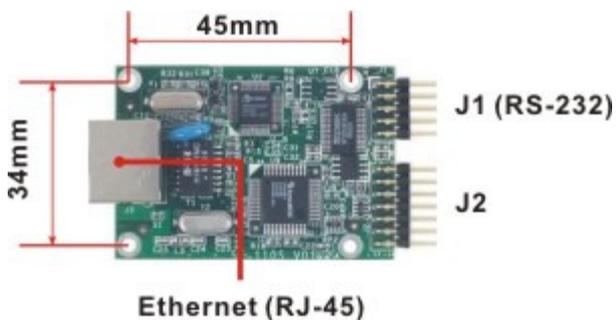

The SE-110S is a mini-mighty Serial-to-Ethernet embedded module which adds network function for legacy RS-232 devices. The SE-110S provides a transparent data channel between RS-232 device and the TCP/IP network, so that the device can be accessed by using standard TCP/IP protocols.

### ✕Versatile Operation Modes

The SE-110S can behave as a TCP server, a TCP client or an UDP node on a Ethernet network to fulfill versatile application requirements.

### ✕Programmable Digital I/O

Besides, the SE-110S also provides 4 TTL digital I/Os. A pre-defined ASCII command set is provided for users to control these I/Os through LAN/WAN.
