

BUS EXPANSION SYSTEM

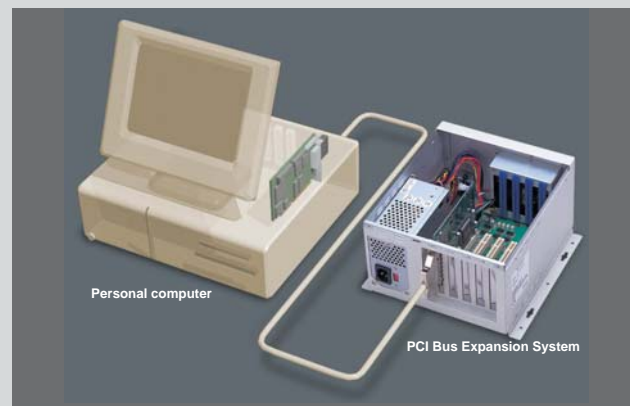

H-02 Bus Expansion System

H-05 Bus Expansion Adaptor Kit

Bus Expansion Unit

The Bus Expansion Unit is a case for extending the expansion slot of a commercial personal computer or Industrial PC (IPC series). If in the expansion slot is insufficient of a PC, or there is too much consumption current of an add-in board and the Bus Expansion Unit exceeds the power supply capacity of a PC, the Bus Expansion Unit is used. An extended unit and a PC are connected using a bus extension adapter or a bus conversion adapter. There is also a type of extended unit which can be used as a CPU unit.

Bus Extend Adaptor Kit

The Bus Extend Adaptor Kit It is a connection kit for connecting an extended unit with a personal computer. The extended unit of the same bus specification as the expansion slot of the main part of a PC can be connected, and the number of slots can be extended. A board is mounted in a PC and an extended unit, respectively, and The Bus Extend Adaptor Kit is used by the exclusive cable connecting between boards.
